Dewar$ for Dollar$

WE ARE SEEKING 5 CHEMISTRY GRADUATE STUDENTS (SAFETY TRAINING MUST BE UP TO DATE).
Push Filled Dewars from the Brown/East Dock to Labs (BRWN and WTHR)

WHY?
- We can’t store filled dewars on the dock (per REM), but labs were not reliably retrieving them
- A dewar delivery service was started in January, but our undergraduate helpers were not quite up to the task
- We seek strong people (male or female) to commit to dewar delivery, one day per week, for ~ 1.0 – 1.5 h/day

WHERE?
- BRWN East Dock

WHAT is the pay rate?
- 5 bucks ($5) per dewar

HOW do I sign up?
- Report to the main office (BRWN 2100). Complete a brief interview and a simple application.
- Confirm that you have no health issues preventing you from undertaking hard physical labor.
- You will get a safety refresher on the use of the freight elevator and safe transport of compressed gases.
- US citizens/residents only...we can’t employ international students due to visa restrictions on labor > 2Q
- We seek students who are willing to commit to a 4 month delivery period (fall, spring or summer).
- You will be assigned a specific day of the week for deliveries.

WHEN do I work?
- You must show up at the east dock on your scheduled day between 2:00-2:15 pm
- Craig MacDonald will have you sign a sheet indicating which deliveries you’ll make that day
- You must complete the deliveries not later than 5:00 pm that same day
- Some deliveries go fast (e.g. basement of BRWN), some take longer (e.g. 4th floor of WTHR)
- Expect to spend an hour per day. We have a minimum of 4 dewar deliveries daily, but count on an average of 6.
- The first tank will be ready for delivery by 2:15 pm
- You will not work when tanks are not being filled (watch for notifications from the purchasing office/Suzy Gustafson) – typically these are university holidays

WHEN will I be paid?
- At the end of the semester, as a stipend for “Services to the Chemistry Dept”
- The main office (Lynn Rider) will record the number of dewars delivered daily

OTHER BENEFITS?
- This is exercise! Your biceps and pectorals will thank you.
