If you are interested in sharing your research with others,
If you are interested in practicing teaching and presentation skills, and
If you are interested in receiving academic credits for these,

Enroll in **GK-12 program** for Fall 2018 by August 24th.

“Participating in **GK-12** was the single best decision I have made in my professional life and it will forever influence my career path in the future” (Vahap, Purdue Ph. D. Student)

**GK-12** is an exciting program organized through the Graduate School that gives Masters, Ph.D., and Post-doctoral students a mentored, in-depth opportunity to share their research with K-12 students and teachers in local schools. **GK-12** provides participants with enhanced skills and experience in outreach, teaching, and communication of their research with diverse audiences. Past participants have found that it makes them more competitive for academic and professional jobs.

After an initial training session, **GK-12** participants will work with teachers in a local school for approximately one day a week for 10 weeks. By the end of the semester, they will develop and teach a lesson based on their interests and research. All participants are eligible for Student Service Learning grants (up to $500)

Students may elect to register for 2 credit hours, or participate in **GK-12** as volunteers. The program is open to all Masters, Ph.D., and Post-doctoral students at Purdue University.
