Pfizer Parenteral R&D Professional Development Program

The Pfizer Parenteral R&D Professional Development Program develops future leaders. Be one of them.
You achieved your graduate degree, now it’s time to apply your knowledge to develop specialty parenteral products that positively impact patient care. The Pfizer Parenteral R&D Professional Development Program is an intensive, two-year rotational program designed to provide recent graduates with diverse and challenging cross-functional R&D assignments that prepare them to assume significant roles in driving Pfizer’s future in the healthcare industry. The program is designed to accelerate participants’ personal and professional growth through hands-on experience in a variety of business-critical assignments that deliver essential medicines for global health.

Experience best-in-class
The Pfizer Parenteral R&D Professional Development Program

You achieved your graduate degree, now it’s time to apply your knowledge to develop specialty parenteral products that positively impact patient care. The Pfizer Parenteral R&D Professional Development Program is an intensive, two-year rotational program designed to provide recent graduates with diverse and challenging cross-functional R&D assignments that prepare them to assume significant roles in driving Pfizer’s future in the healthcare industry. The program is designed to accelerate participants’ personal and professional growth through hands-on experience in a variety of business-critical assignments that deliver essential medicines for global health.

How the program works
PDP scientists engage in 4 rotations that encompass every aspect of parenteral drug development. This work begins in Pipeline Development, where new product concepts are identified. Select candidates are advanced to Concept Evaluation, where the Concept Evaluation and Research Team investigates and evaluates potential products for feasibility. Successful targets are advanced to Product Development, where our formulation, analytical, and manufacturing teams perform the required activities for submission to regulatory agencies. Once products are in the marketplace, researchers support life cycle management to continuously improve products for patients and healthcare providers. Additional experience in alignment with your professional goals is then obtained through selection of an elective rotation.

Together, these stages provide insight into the full product life cycle and allow for a comprehensive understanding of the parenteral drug industry. These combined experiences prepare you to become the next generation of Pfizer’s leaders.

Candidate requirements
- A Ph.D. in biomedical/chemical engineering, pharmaceutical sciences, chemistry, or equivalent
- Strong interpersonal skills with demonstrated leadership ability
- Relevant research, work experience or internship
- Adaptability

What sets our program apart... everything!
- An instant mentor network delivering one-on-one support at all levels of the organization
- Comprehensive and challenging assignments designed to provide experience across the entire product development life cycle
- Visibility to senior-level management
- Diverse career opportunities upon program completion
- Opportunity to actively contribute to the development of life changing healthcare products
