

LOCAMETZ[®]

Kit for the preparation of
gallium Ga 68 gozetotide
INJECTION FOR INTRAVENOUS USE

Locametz is a prostate cancer targeted PET imaging agent that is injected into a patient systemically, but rapidly localizes to prostate cancer cells, thereby enabling both primary and metastatic prostate cancer tissue to be visualized by PET. This PET imaging can reveal whether and where a prostate cancer has metastasized, thereby allowing the oncologist to more accurately design the best treatment for the disease.
